## **INTERACTIVE/SEQUENCING FOUNTAIN COST ESTIMATING QUESTIONNAIRE**

Please furnish complete answers to the following questions in order to furnish you with an accurate cost estimate for design services and equipment system for your fountain:

1. Indicate size (footprint) of the proposed fountain 'wet' area (send plan if available).
2. Indicate quantity and spacing (layout) of nozzles within fountain footprint.
3. Indicate type of nozzles, (foamy stream or clear stream) and stream diameter (1" maximum).
4. Is nozzle sequencing required? Will each nozzle be independently sequenced, or will all nozzles rise and fall together?
5. Is Fountain Lighting required for night viewing? Do you want color changing or 'white' lighting? Do you want the lighting to sequence with the nozzle sequencing?
6. A separate storage tank/reservoir is generally required for interactive/sequencing systems. Please indicate location and distance from fountain footprint area.
7. Indicate location, distance and elevation of fountain equipment room from center of fountain footprint.
8. What is your timetable for completion of the fountain installation? Our typical shipping schedule is 6 weeks after receipt of purchase order and payment. If drawing approval is required by customer, then shipping schedule commences from receipt of approved design drawings. Engineer stamped drawings are 'by others' if required, and you are responsible for all code compliance items.
9. What is the budget for Roman Fountain system design and equipment package? (You may assume a 'basic system' will cost around \$15K-\$20K. An 'average system' \$25K-50K or more, and a 'complex system' \$75K-100K or more). Remember, in addition to our design and equipment package, you will need to include construction and installation costs (by owner selected installer/contractor) for a total installed cost.
10. Contact us immediately if you have any questions about the information we are requesting from you.

Sincerely,

Roman Fountains  
Design and Estimating Department
