

FORMAL WAIVER OF DESIGN / SHOP / INSTALLATION DRAWING APPROVAL

It is Roman Fountains' official policy not to begin fabrication or ship/deliver any fountain equipment until such time as our final design/shop/installation drawings are formally issued, reviewed, and one (1) copy returned to Roman Fountains, stamped and initialed "REVIEWED" by the client. Factory quoted equipment delivery dates commence from the date formal approvals are received from client in writing at our offices, Albuquerque, New Mexico U.S.A.

This policy is designed to protect both client and Roman Fountains Corporation from conflicts or misunderstandings that might otherwise arise relating to overall system design and installation requirements and responsibilities; including but not limited to mechanical, electrical, pipe sizing and routing, proper installation elevations, structural and any other fountain system design issues relating to overall system function, operation, system performance and safety, and Roman Fountains issuance of product warranty and system performance guarantees.

Should client, for any reason including but not limited to project progress and completion schedules, request any equipment or components for delivery prior to formal drawing package approval, client may do so with the full and complete understanding that it does so of its own volition, and with the understanding that it accepts full and complete responsibility and liability for incorrect application and installation of said equipment, including but not limited to any incidental or consequential costs and damages as a result of having to remove and replace said equipment.

"I am authorized to waive formal review and approval of Roman Fountains system design/shop/installation drawing package for the project referenced below. I accept full responsibility and liability for such waiver including any incidental or consequential damages that may occur as a result of this waiver including, but not limited to, demolition, removal, repurchase, replacement and reconstruction of the fountain system, structures and surrounding hardscape areas or any other affected property".
