SPECIFICATION DATA: Trident Nozzle; two-Piece precision machined brass construction, interchangeable spray tops, w/ 'O'-ring seal, 3/4" NPT (F) connection on "Uni-Body".

DESIGN/APPLICATION DATA: RTN-Series "Trident" nozzle produces one of three distinct spray patterns with interchangeable tops; Three Tier Spray, Jet Cluster Spray & Crown Jet Spray. Nozzle is designed for smaller fountains and close-up viewing. The sprays are "delicate" and susceptible to windy conditions.

- NOTES:** 1. Fine screening at pump, half the diameter of jet orifice or smaller to minimize nozzle clogging recommended.
2. Due to continuing product improvement program, Roman Fountains reserves the right to change the specifications without notice.
